

Who We Serve

Consumer Population Profile

Fiscal Year 2017-2018

WWS-Fiscal Year 2017-2018

Executive Summary

Summary ▶ In fiscal year 2017-2018, Riverside University Health Systems Behavioral Health (RUHS-BH) provided services to a total of 59,298 consumers through mental health and substance abuse services. In mental health, a total 51,523 consumers were served through outpatient mental health, detention services, and inpatient psychiatric services. In substance abuse, a total of 7,775 consumers were served through detoxification, residential services, outpatient substance abuse treatment services, and intensive half day treatment programs (e.g., Drug Court, MOMs).

County Comparison ▶ When RUHS-BH mental health consumer population was compared to 2017 Riverside County population data there were higher proportions of transition age youth and adult consumers in the RUHS-BH consumer population compared to the general population. However, the proportion of older adult consumers was less than the general population of Riverside County. The RUHS-BH substance use consumer population served a higher proportion of adults than is present in the Riverside County population, but served a lower proportion of Children and Older Adults than are present in the Riverside County general population.

Region ▶ The consumer populations served were highest for the Western region of the County for mental health and in the Western region for substance abuse.

Gender ▶ Overall, within mental health, more male than female consumers were served (54% to 45%, respectively). Within substance abuse, the majority of consumers served were male at 60% of the population. There were some variations by age. In mental health, there were more older adult females (58%) than males (42%) served; however, for substance abuse there were more male older adult (65%) than female older adult (35%) consumers served.

Race/Ethnicity ▶ Hispanic/Latinos made up the largest race/ethnic group served, while Caucasians made up the second largest ethnic group served. This was true for mental health but not for substance use, where the reverse was true.

History & Diagnosis ▶ Overall, in mental health, 31.1% of consumers had a history of drug/alcohol abuse and 74.2% of consumers had Medi-Cal. In substance abuse, 31.2% were reported to have a mental illness and 75.8% had drug Medi-Cal. In mental health, within each region the largest proportion of consumers served had been primarily diagnosed with Mood, Anxiety & Adjustment disorder or Major Depression. This trend changed when looking specifically at primary diagnoses by age groups. Children more often had a diagnosis in the AD/D grouping (which includes Oppositional Defiance, Conduct Disorders, and Attention Deficit) and Mood, Anxiety, or Adjustment disorders. Adults and Older Adults were more often diagnosed with Major Depression or Schizophrenia/Psychosis disorder. In substance abuse, overall 34.0% of consumers had an opiate diagnosis, while 33.1% of consumers had an Amphetamine diagnosis. Combined these two diagnoses accounted for 67% of the treatment population. In examining diagnosis by age, children had primarily a Marijuana diagnosis (57.5%). Over a third of adults (36.5%) had an Amphetamine diagnosis, followed by Opiates (34.1%). The majority of older adults (70.6%) had an Opiate diagnosis, with Alcohol being the next highest diagnosis.

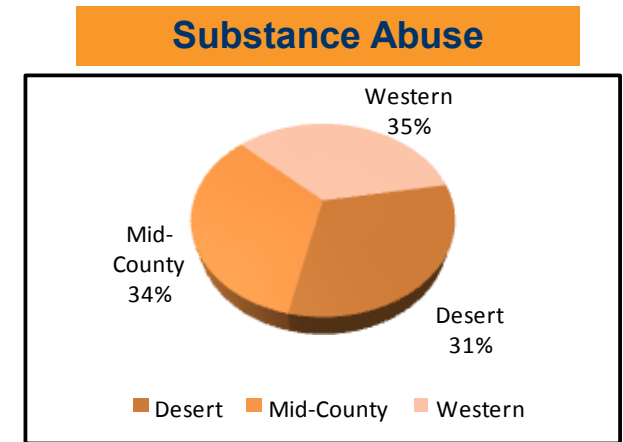

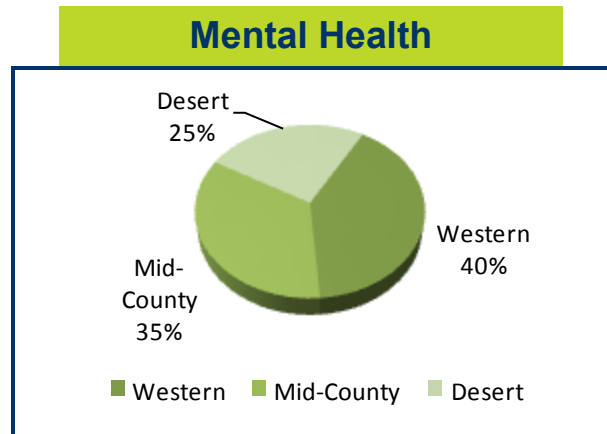

WWS-Fiscal Year 2017-2018

Region and Age Group

Regional Groups

In mental health, the Western and Mid-County region provided services to a greater proportion of consumers than the Desert region.

In Substance Use, the Western region served the highest proportion with the Desert and Mid-County region serving similar proportions.

Age Groups of Consumers Served

	FY 16-17	%	FY 17-18	%	Change From Previous Yr	FY 16-17	%	FY 17-18	%	Change From Previous Yr
Children (<18 Years)	12,411	25%	12,903	25%	0%	325	4%	478	6%	2%
Adults (18-59 Years)	33,412	67%	34,174	66%	-1%	6,840	91%	6,889	89%	2%

Total	50,054		51,523		2.93%	7,538		7,775		
Transition Age Youth	10,547	21%	10,834	21%	0%	1,315	17%	1,331	17%	0%

Age Groups

Overall, the total consumers served by mental health increased (2.93%) from FY16/17 to FY17/18. The largest age group served were adults (66%). In mental health, both youth under 18 years and older adults showed an increase in the number served. Substance abuse served primarily adults, but more youth were served in FY17/18 compared to last fiscal year. Percentages may not sum to 100% due to rounding.

Population Comparisons

The table above compares the mental health and substance abuse population with the general Riverside County population estimates for 2017*. In mental health, the older adult population is underrepresented relative to their proportion in the general population. This is also true in the substance abuse population where the older adult population is underrepresented relative to the County general population. In mental health, the proportion of children served is slightly less than the proportion of children in the County; whereas, for substance abuse the children population is underrepresented relative to their proportion in the general population. The adult and transition age youth populations served in both mental health and substance abuse were larger than their proportion in the general population

WWS-Fiscal Year 2017-2018

Gender

Mental Health								Substance Abuse						
	West	%	Mid-County	%	Desert	%	Total	West	%	Mid-County	%	Desert	%	Total
Male	11,361	55%	9,433	53%	7,319	57%	28,113	1,639	60%	1,476	56%	1,528	63%	4,643
Female	9,456	45%	8,356	47%	5,598	43%	23,410	1,090	40%	1,140	44%	902	37%	3,132
Total	20,817		17,789		12,917		51,523	2,729		2,616		2,430		7,775

The table above illustrates gender distributions in the consumer population by region: the male consumer population was largest across all the three RUHS-BH regions for both mental health and substance abuse. Countywide, RUHS-BH serves a somewhat higher proportion of males than females with mental health serving 55% males and substance abuse serving 60% males.

Mental Health									Substance Abuse							
	Children (<18)	%	Adults (18-59)	%	Older Adults (60+)	%	Total	Transition Age (16-25)	Children (<18)	%	Adults (18-59)	%	Older Adults (60+)	%	Total	Transition Age (16-25)
Male	7,032	54%	19,223	56%	1,858	42%	28,113	5,933	335	70%	4,044	59%	264	65%	4,643	810

Total	12,903		34,174		4,446		51,523	10,834	478		6,889		408		7,775	1,331

The table above illustrates gender by age group. In mental health, males comprise a higher proportion of the children, adults and transition age youth consumers served. Conversely, a greater proportion of the older adult mental health population is female. In substance abuse, about a third of the children and older adult consumers served are female. Across all age groups, male consumers are the majority served in both mental health and substance abuse.

WWS-Fiscal Year 2017-2018

Other	11,255	22%	54,487	2.3%	+19.7%	354	5%	54,487	2.3%	+2.7%
Total	51,523		2,389,723			7,775		2,389,723		

In 2017-2018 fiscal year the Hispanic/Latino consumers made up the largest proportion of the population served in mental health (38%) but not in substance abuse, where slightly more Caucasians (44%) were served than Hispanic/Latino (43%). Substance abuse served a larger proportion of Hispanic/Latino consumers than mental health. Compared to the proportion of Hispanic/Latino consumers represented in the Riverside County population, mental health served 9.6% less than the proportion reported for the Riverside County population (47.6%), while substance abuse served 4.6% less than is present in the County population. Although, Native American consumers accounted for the smallest proportion of the consumer population in mental health and substance use, their representation in mental health is representative of the County population and they are over represented in Substance use compared to the County population. Asian/PI consumers are represented at lower levels than their representation in the County population in both mental health and substance abuse. In mental health, the proportion of Caucasian consumers served is less than their representation in the population, while the proportion of Black/African American consumers served is larger than their presence in the County population. Other reported race/ethnicity is higher for mental health than substance abuse. The Other category includes other race, multiracial and unknown. Percentages may not sum to 100% due to rounding.

Among children, Hispanic/Latinos were served more than any other race/ethnicity group in mental health and across all regions. In substance use, Caucasians were served slightly more than Hispanic/Latinos. The proportion of Hispanic/Latino children served by mental health was lower than the proportion of Hispanic/Latino children present in the County child population. In substance abuse, the proportion of Hispanic/Latino children served was also less than the general County child population.

History- Medi-Cal

Mental Health								
	West	%	Mid-County	%	Desert	%	Total	%
Medi-Cal	15,543	74.7%	13,763	77.4%	8,909	69.0%	38,215	74.2%
No Medi-Cal	5,274	25.3%	4,026	22.6%	4,008	31.0%	13,308	25.8%
Total	20,817		17,789		12,917		51,523	

The table above provides the Medi-Cal status for consumers served by mental health. Overall, 74% of the mental health consumers served had Medi-Cal at some point in the 2017-2018 Fiscal Year. Regionally, there were some differences with mental health Mid-County region showing the highest proportion of Medi-cal consumers served at 77%, while the Desert region showed 69% enrolled in Medi-Cal.

Substance Abuse								
	West	%	Mid-County	%	Desert	%	Total	%
ADP Medi-Cal	2,053	75.2%	1,963	75.0%	1,879	77.3%	5,895	75.8%
No ADP Medi-Cal	676	24.8%	653	25.0%	551	22.7%	1,880	24.2%
	2,729		2,616		2,430		7,775	

The table above provides the drug Medi-Cal status for consumers served by Substance Abuse. Overall, 76% of the substance abuse consumers served had drug Medi-Cal at some point in the 2017-2018 fiscal year. In substance abuse, the Desert region showed the highest proportion of consumers served with drug Medi-cal at 77%, while the West and Mid-County regions each had 75% of consumers enrolled in drug Medi-Cal.

WWS-Fiscal Year 2017-2018

History- Co-Occurring

History Drug/Alcohol Abuse

A history of drug or alcohol abuse was reported for almost a third of the mental health consumers served. There was some regional variation with the Desert region having the highest proportion of consumers with a drug or alcohol history. Of those recorded as having a history 21% received substances abuse services.

Mental Health								
History Drg/Ach	West	%	Mid-County	%	Desert	%	Total	%

When analyzing FY 2017-2018 mental health countywide consumer primary diagnoses, a large proportion of consumers were diagnosed with Major Depression (25%), Mood, Anxiety or Adjustment disorder (23%) or Schizophrenia/Psychosis disorders (19%). Consumers showed less Organic (0.3%) or Drug/Alcohol (6%) disorders compared to other diagnoses. Within each region, these patterns were similarly prevalent. The Other diagnosis category comprised 8.5% of consumer diagnoses. Other diagnosis includes eating disorders, sleep disorders, somatic, pervasive developmental disorders, encounter for examination, impulse and missing diagnosis.

A large proportion of consumers under the age of 18 were diagnosed with either a Mood, Anxiety, & Adjustment disorder (34.5%) or AD/D (29.4%) which includes oppositional defiance, conduct disorders, and attention deficit disorders. Among adult consumers, Schiz/Psych (24.0%), Major Depression (23.6%), or Mood, Anxiety, & Adjustment disorders (20.7%) were more frequently diagnosed. For older adults, Major Depression (29.5%) and Schiz/Psych (27.5%) were the most frequent diagnoses. Compared to adults, the older adult consumers had more consumers with Major Depression or Schiz/Psych disorders than Mood disorders. Finally, although Schiz/Psych disorder was a frequent diagnosis for adult (24.0%) and older adult (27.5%) consumers, the proportion of youth with this disorder was very low (1.0%).

Total	2,729		2,616		2,430		7,775	

Data on diagnosis was analyzed from ICD-10 most recent primary diagnosis recorded in the electronic health record for substance abuse cases. Slightly over a third of substance use consumers (34.0%) had an Opiate diagnosis. Another third of consumers (33.1%) had an Amphetamine diagnosis. Combined these two diagnoses accounted for 67% of the treatment population. Alcohol was higher than marijuana diagnoses. Regionally there were some variations; however, Amphetamine or an Opiate diagnoses was highest in all regions. The West region showed the highest for Amphetamine diagnosis while the Mid-County region showed the highest for Opiate diagnosis.

Data on diagnosis was analyzed from ICD-10 most recent primary diagnosis recorded in the electronic health record for substance abuse cases. Overall most substance abuse consumers (34.0%) had an Opiate diagnosis. A significant proportion (33.1%) had an Amphetamine diagnosis. This pattern differed among the age groups. The majority of youth had a marijuana diagnosis with only 6.3% having an Amphetamine diagnosis. Fewer youth had an alcohol diagnosis compared to adults and older adults. Over a third of adults (36.5%) had an Amphetamine diagnosis, while the overwhelming majority of older adults (70.6%) had an Opiate diagnosis. Following opiates the next highest diagnosis for older adults was Alcohol. For adults, an Opiate diagnosis was the next highest diagnosis followed by Alcohol.
