

2022 Surveillance Report

(January 1st, 2022-February 28th, 2022)

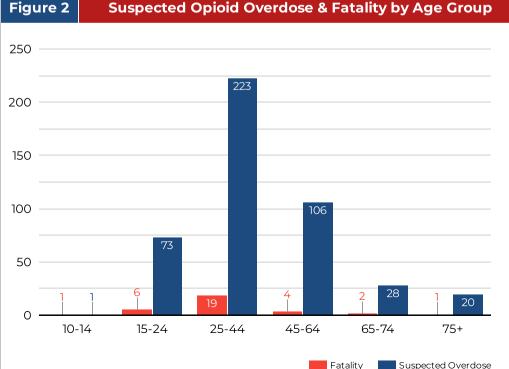

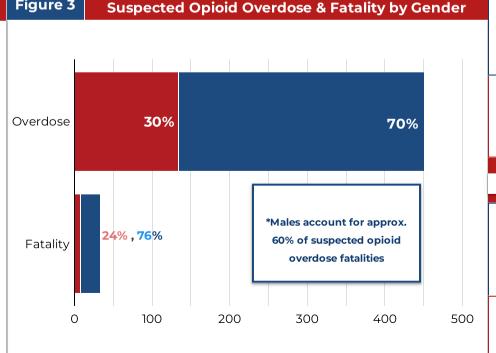

All overdose incidence rates are monitored using 9-1-1 patient records made available in near real-time data from FirstWatch®, a data platform capturing all patient care report data within the emergency medical service system.

According to California Welfare and Institutional Code (WIC), a 5150 (mental health crisis) enables law enforcement and designated medical professionals to place individuals posing imminent risk to self or others on involuntary 72-hour hold. From 1/1/2022-2/28/2022, Riverside County Emergency Medical Services (EMS) providers responded to an average of 18 WIC-5150 emergency and non-emergency transport overdose calls each month in 2022.

Homelessness (unstable housing) is an important factor for resource allocation and understanding all factors that can lead to overdose in the EMS system. Homeless status is established and self-reported by patient to EMS provider and noted in electronic patient care records that display patient as homeless. There are two fields within the record "Patient Home Address"="Homeless" or a checkbox, "Is patient homeless" marked "Yes" to indicate homeless patient status. The data displays all overdose records that involve a patient with homeless status.

Suspected Opiate Overdose Treatment Compliance (January 1st, 2022- February 28th, 2022)

In order to get an in depth look at opioid overdose data, it is important to understand the willingness of patients that are seen and treated by EMS providers to comply with provider recommendations. This provides context and highlights potential obstacles in overdose treatments.

The following data represents patients that go against medical advice (AMA), thereby refuse treatment, or transport to a designated healthcare facility for further treatment. Patients encountered that were determined to be deceased when EMS units arrived are denoted as DOA.

Naloxone, aka Narcan, is the name of a generic drug that temporarily reverses the effects of an opioid overdose. First responders in our community have been trained to use narcan when they encounter an overdose while responding to an emergency incident. Understanding its efficacy in suspected EMS overdose incidents can help guide response activities and inform health care providers offering treatment services.
