

Figure 1 Weekly Comparison of Suspected Opioid Overdose Data (January 1st, 2022-October 31st, 2023)

All overdose incidence rates are monitored using 9-1-1 patient records made available in near real-time data from FirstWatch®, a data platform capturing all patient care report data within the emergency medical service system.

Suspected Opioid Overdose Incident Totals

Comparison to Previous Year
 (Jan 1st 2022- Oct 31st, 2022)

Opiate Overdose 2023

Overdoses in Patients Experiencing Homelessness and/or Mental Health Crisis

(January 1st, 2023- October 31st, 2023)

Overdose-Homelessness Records

810

Homelessness-Overdose Fatality

22

Mental Health-Overdose Records

166

Mental Health-Overdose Fatality

0

According to California Welfare and Institutional Code (WIC), a 5150 (mental health crisis) enables law enforcement and designated medical professionals to place individuals posing imminent risk to self or others on involuntary 72-hour hold. From 1/1/2023-9/30/2023, Riverside County Emergency Medical Services (EMS) providers responded to an average of 17 WIC-5150 emergency and non-emergency transport overdose calls each month so far in 2023. Homelessness (unstable housing) is an important factor for resource allocation and understanding all factors that can lead to overdose in the EMS system. Homeless status is established and self-reported by patient to EMS provider and noted in electronic patient care records that display patient as homeless. There are two fields within the record "Patient Home Address"="Homeless" or a checkbox, "Is patient homeless" marked "Yes" to indicate homeless patient status. The data displays all overdose records that involve a patient with homeless status.

Figure 11

Suspected Opiate Overdose Treatment Adherence (January 1st, 2023-October 31st, 2023)

In order to get an in depth look at opiate overdose data, it is important to understand the willingness of patients that are seen and treated by EMS providers to comply with provider recommendations. This provides context and highlights potential obstacles in overdose treatments.

The following data represents patients that go against medical advice (AMA), thereby refuse treatment, or transport to a designated healthcare facility for further treatment.

Treated & Transported

Naloxone Administration in EMS Suspected Opioid Overdose Calls (Jan-Oct 2023)

| | | |
|--|-------------------------------------|-------------------------------------|
| Narcan Administered by EMS 1,831 | No Narcan Administered 81 | Administered by Other 877 |
|--|-------------------------------------|-------------------------------------|

Naloxone, aka Narcan, is the name of a generic drug that temporarily reverses the effects of an opioid overdose. First responders in our community have been trained to use narcan when they encounter an overdose while responding to an emergency incident. Understanding its efficacy in suspected EMS overdose incidents can help guide response activities and inform health care providers offering treatment services.

Naloxone Administration Prior to EMS Arrival

Naloxone Administration in All Suspected Opioid Overdose Calls (15A) & Overdose Fatality Calls (15B)

**ABO (administered by other) refers to naloxone administered by someone other than EMS prior to EMS arrival*
**Yes, ABO refers to naloxone administered by EMS as well as prior to arrival*
